

DLTtape[®]

Native capacity up to 40GB (80GB with 2:1 compression) and sustained transfer speeds up to 6MB per second (12MB with 2:1 compression) provide the performance essential to data-intensive applications. DLTtape maintains a log index at the head of the tape, allowing extremely high-speed data retrieval. DLTtape IV was specifically designed for read compatibility with future generations of DLTtape drives—so the data you archive today will be accessible tomorrow, and for years to come.
