Agenda

- Label Design Key Considerations
- Barcode Printer Types and Settings
- Barcode Label ANSI Grades
- Label Material & Quality Considerations

LABEL DESIGN CONSIDERATIONS

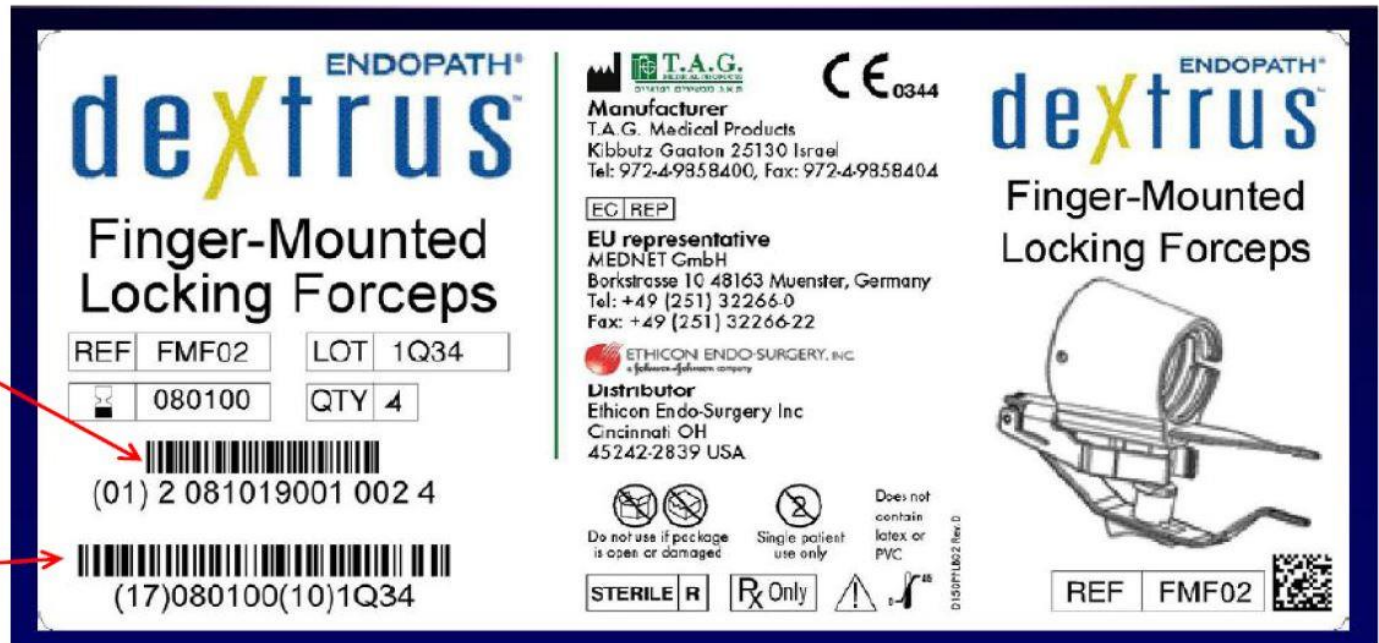

Label Design Impacts Readability and Scannability

- Identify Target Label Size
- Layout Required Information on Label to Ensure it Will Fit
- Determine Print DPI Required, by Taking into Consideration:
 - Text size
 - Use of regulatory symbols and their size
 - Print speed required
 - Barcode size

Label Size and Amount of Required Information

Device Identifier
(01) GS1 GTIN

Production Identifier
(17) Expiration
(10) Lot Number

ENDOPATH[®]
dextrus[™]
Finger-Mounted Locking Forceps

REF FMF02 LOT 1Q34
080100 QTY 4

(01) 2 081019001 002 4
(17)080100(10)1Q34

T.A.G.
T.A.G. Medical Products
Kibbutz Gaaton 25130 Israel
Tel: 972-49858400, Fax: 972-49858404

CE 0344

EC REP
EU representative
MEDNET GmbH
Borkstrasse 10 48163 Muenster, Germany
Tel: +49 (251) 32266-0
Fax: +49 (251) 32266-22

ETHICON ENDO-SURGERY, INC.
a Johnson & Johnson company

Distributor
Ethicon Endo-Surgery Inc
Cincinnati, OH
45242-2839 USA

Do not use if package is open or damaged
Single patient use only
Does not contain latex or PVC

STERILE R Rx Only ⚠ ⚡

REF FMF02

0150P1UB2 Rev. 0

Device Identifier and Production Identifier
Concatenated in a GS1 Data Matrix symbol

Determining DPI Text & Regulatory Symbols

- If printing text or regulatory symbols less than 6 pt, 600 dpi is recommended

203 dpi

300 dpi

600 dpi

Determining DPI Print Speed

- How fast do the labels need to print?
- As DPI increases, the maximum print speed of a printer decreases, for example:

110Xi4™

PRINT RESOLUTION	PRINT SPEED
203 dpi	up to 14 ips
300 dpi	up to 12 ips
600 dpi	up to 6 ips

Determining DPI Bar Code Size

- For 2-D barcodes less than 3/10 x 3/10", 600 dpi is recommended
- Minimum size for 1-D barcodes varies based on the number of digits in the barcode (printing the DI and PI in one barcode or two)

BARCODE PRINTER TYPES & SETTINGS

Printer Considerations

- Where is the labeling being done?
 - Within company
 - Contractor
- How is the printing being done?
 - On-demand printing = many lower duty cycle printers
 - Batch printing = less higher duty cycle printers

Printer Types

Xi4

300 or 600dpi
24/7 Mission Critical
Unlimited Duty Cycle

ZT410

300 or 600dpi
Value-Performance
8-10 Rolls/Day

ZD500

300 dpi
Value
2 Rolls/Day

Printer Settings

- Determine the Best Settings for the Below To Obtain High-Quality, Consistent Print Quality.
 - Printhead Pressure. Adjust to insure right amount of pressure based on label material being used.
 - Print Darkness. Adjust to insure not
 - Print Speed
- Tips:
 - Verify print quality using a pause test
 - Print a printer configuration label (contains printer settings) and put in door (in case settings get changed)
 - Encourage contractor to use the same brand of printers you are using and provide them with printer setting guidelines to ensure consistent print quality

Barcode Label ANSI Grades

- ANSI Grades
 - Barcodes can appear “good” to the naked eye, but they may not be
 - Provide a measure for how well a barcode will scan
 - A to F scale
- FDA ANSI Grade Requirements: C or better

What Affects Barcode Label ANSI Grades?

- Barcode Size
 - The larger the barcode, easier to scan.
 - Reducing the barcode size too much, can result in an unscannable barcode

What Affects Barcode Label ANSI Grades?

- Barcode orientation
 - If printing 1-D barcodes, we recommend you print picket fence v. ladder

“Picket Fence”
Printhead element turns on
and stays on

“Ladder”
Printhead element
turns on and off,
on and off

What Affects Barcode Label ANSI Grades?

- Quiet Zone
 - Need enough white space on each side of barcode or it won't scan

What Affects Barcode Label ANSI Grades?

- Dirty/Failed Printhead Element
 - Perform periodic print quality tests to check printhead
 - Perform printhead cleaning to remove any debris obstructing the printhead.

LABEL MATERIAL & QUALITY CONSIDERATIONS

Label Material Considerations

- Sterilization
 - Not every label will withstand Steam Autoclave, Gamma Radiation & Ethylene Oxide
- Chemical Resistance
 - Hospitals wipe-down reusable items with strong healthcare cleansers to prevent the spread of disease\
- UL-certified Label Required?

FDA Label Quality Requirements

- Title 21, Chapter 1 FDA, Subchapter H
 - Label Integrity
 - Remain legible and affixed during processing, storage, handling, distribution, and where appropriate use
 - Labeling Inspection
 - Need to verify info on the label is correct.
 - Need to document the release in the DHR, including the date and signature of the individual(s) performing the examination
 - Labeling Storage
 - Ensures proper ID and prevents mixups
 - Labeling Operations
 - The label and labeling used for each production unit, lot, or batch shall be documented in the DHR.
